```

Eigener Test

1. **Navigation funktioniert** zwischen allen Seiten
2. **Rezeptliste lädt** und zeigt Inhalte
3. **Formular ist funktional** und validiert Eingaben
4. **UI ist responsiv** auf verschiedenen Bildschirmgrößen
5. **Error Handling** funktioniert bei ungültigen Eingaben
6. **Performance** ist akzeptabel für Benutzer

Bonus

Überlege, welche weiteren Szenarien sinnvoll wären. Diese müssen nicht implementiert werden!

- **Suche/Filterung von Rezepten**
- **Löschen eines Rezepts**
- **Fehlerfälle (API down, 500er)**

Diskutiere, wie man diese Tests in ein CI/CD Setup integrieren könnte.

Ein CI/CD Workflow für Cypress bedeutet, dass bei jedem Commit oder Pull Request die Anwendung automatisch gebaut, gestartet und die Cypress-Tests im Headless-Modus ausgeführt werden. Die Ergebnisse (inklusive Reports, Screenshots und Videos) werden dabei im Pipeline-System gespeichert, sodass Fehler frühzeitig sichtbar werden.
